

UML Behavioral Diagrams

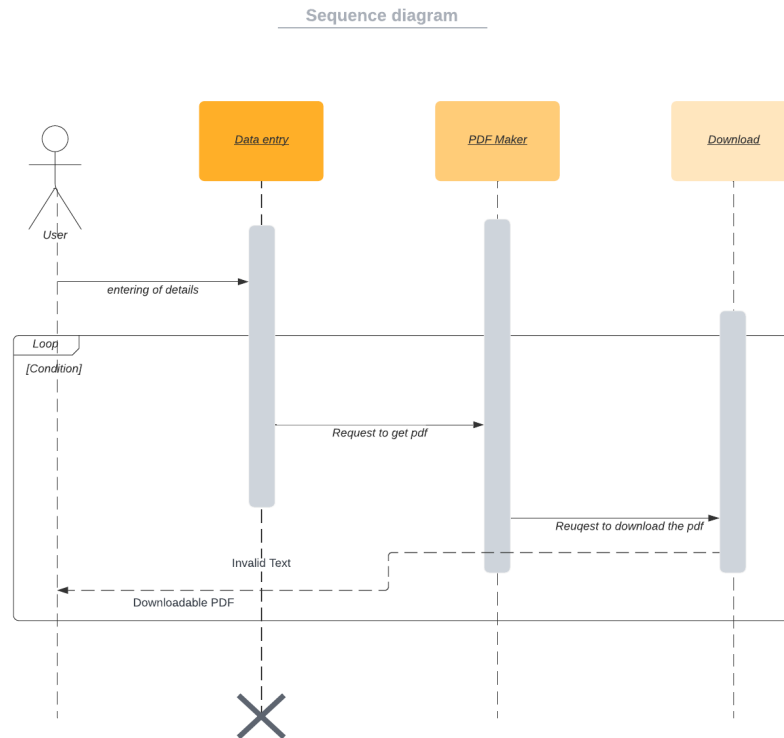

Activity Diagram

This diagram shows the dynamic behavior of our site. It shows the behavior of the three modules, namely data entry, resume maker and download. It also displays the way these modules would behave on getting conditional inputs

Sequence Diagram

In the sequence diagram, we plot the three important classes, namely the resume data entry form, the resume making engine, and the downloading engine. The time to post and receive data has been relatively specified.

Collaboration diagram

Here we see how all three of our classes collaborate and behave with each other via links and messages
